The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hercules Inc (EP 0757895) as further evidenced by Lowe.

Hercules discloses low fat salad dressing made to contain a pectin derivative as a partial or complete fat substitute. The dressing formulation is shown at the example bridging columns 6 and 7, starting at line 37. In this case the pectin component is regarded as the insoluble fiber source. Casein is a selected protein for this composition. The oil sources for use in the product are shown at column 5, lines 44-46. Up to 35% fat is disclosed for used at column 5, line 9. The pH of the emulsion is shown at column 2, line 58. The use of egg white is contemplated at column 5, line 17. Claim 1 appears to differ from the reference in the suggestion that the protein in the composition is a viscosity building emulsifier. Lowe is relied upon to teach the casein is a well-known emulsifier for foods. Similarly egg white is also used as an emulsifier in foods. Thus the composition of Hercules

appears to contain all of the components of the claim. It is appreciated that "viscosity building" is not mentioned in the reference but one of ordinary skill in the art would have expected the viscosity to be further enhanced by the addition of any of the proteins in Hercules. It is appreciated that the HLB of the emulsifiers and the oil droplet size of the composition are not mentioned, but no unobvious or unexpected results are seen from the recitation of these features, particularly when a stable emulsion is formed. It is also appreciated that the settings for the homogenizer are not mentioned but to use one type of colloid mill over another would have been an obvious matter of choice with regard to the particular homogenizing apparatus that was available.
